for students' independent work**

**Academic discipline
"Ophthalmology"
Educational level "Master"
Field of knowledge 22 "Health care"
Specialty 221 "Dentistry"
Department of Ophthalmology**

Kyiv - 2024

Authors: Associate Professor Greben N.K., Pavlenko R.O.

Approved at the meeting of the Department of Ophthalmology from “29” August 2024 year, protocol No.1

Head of the Department, Doctor of Medicine, Professor Zhaboiedov D.G.

Reviewed and approved: CMC in Surgical Disciplines from _____ 202_ p. , protocol №__

2. Topic of the lesson: "**Functions of human visual system**".

3. Competence.

After studying the topic, students should **know:** the functions of the organ of vision; methods for determining the functions of the organ of vision; **be able to:** determine visual acuity by subjective method; determine color perception using Rabkin's polychromatic tables (or Ishihara test plates); determine the visual field using the confrontation visual field testing and using the arc perimeter (or bowl-shaped Goldmann perimeter); determine the dark adaptation by the indicative method.

4. The didactic goal is to expand, deepen and detail the scientific knowledge gained by students at lectures and in the process of independent work and aimed at increasing the level of assimilation of educational material, instilling skills and abilities, developing scientific thinking and oral speech of students.

5. Number of classroom hours: 2 hours.

6. Equipment: tables, drawings, videos, Golovin-Sivtsev chart, Polyak optotypes, Snellen Eye Chart, ETDRS chart, Rabkin polychromatic tables, Ishihara test plates, arc perimeter (or Goldman perimeter, or automated computer visual field analyzer), table lamp, magnifying glass, ophthalmoscope, hand sanitizers.

Lesson plan:

№	The name of the stage	Description of the stage	Levels of learning	Time
1.	Preparatory (15%). Materials of methodological support: questions, tasks of the second level, written theoretical tasks, tests of the second level.	1. Organization of the lesson. 2. Setting educational goals, motivation of the topic. 3. Control of the initial level of knowledge, skills, abilities: 1) study of visual acuity by subjective method; 2) color vision examination; 3) types of color perception disorders; 4) research on adaptation to darkness; 5) types of dark adaptation disorders; 6) examination of peripheral vision; 7) pathology of peripheral vision.	II	13 Min.
2.	Basic (65%). Materials of methodological support: atypical tasks in the forms: patients, case histories, text situational tasks; algorithms for the formation of professional skills.	1. Formation of professional skills and abilities: 1) master the skills'of objective examination; 2) substantiate the diagnosis based on the results of the study; 3) to supervise the patient, substantiate and make a clinical diagnosis, prescribe treatment.	III	59 Min.
3.	Final (20%). Materials of methodological support: text situational tasks, tests of the third level, results of patient supervision (medical histories); Approximate map of independent work with literature.	1. Control and correction of the level of professional skills and abilities. 2. Discussion of the results of the supervision of patients. 3. Summing up the results of the lesson (theoretical, practical, organizational). 4. Homework: educational literature on the topic (main, additional).	III	18 Min.
