Title: Microsurgical basics and bypass techniques / Evgenii G.

Belykh, Nikolay L. Martirosyan, M.Yashar S. Kalani, Peter Nakaji.

Description: New York : Thieme, [2020] | Includes bibliographical references and index. | Summary: "All neurosurgeons must undergo rigorous training in the laboratory and practice bypass techniques repetitively before performing microneurosurgery on a patient.

Microsurgical Basics and Bypass Techniques by Evgenii Belykh, Nikolay Martirosyan, and M. Yashar S. Kalani is a comprehensive yet succinct manual on fundamental laboratory techniques rarely included in clinical textbooks. The resource simplifies repetitive microsurgical practice in the laboratory by providing a menu of diverse, progressively challenging exercises. Step-by-step instructions accompanied by easy-to-understand illustrations, expert commentary, and videos effectively bridge the gap between laboratory practice and operating room performance. The book starts with an opening chapter on four founding principles of microsurgical practice inherited from great thinkers and concludes with a chapter featuring cerebrovascular bypass cases. Chapters 2-8 offer a complete one-week curriculum, with a different lab exercise each day, focused on learning basic microsurgery skills"— Provided by publisher.

**Important note:** Medicine is an ever-changing science undergoing continual development. Research and clinical experience are continually expanding our knowledge, in particular our knowledge of proper treatment and drug therapy. Insofar as this book mentions any dosage or application, readers may rest assured that the authors, editors, and publishers have made every effort to ensure that such references are in accordance with **the state of knowledge at the time of production of the book.**

Nevertheless, this does not involve, imply, or express any guarantee or responsibility on the part of the publishers in respect to any dosage instructions and forms of applications stated in the book. **Every user is requested to examine carefully** the manufacturers' leaflets accompanying each drug and to check, if necessary in consultation with a physician or specialist, whether the dosage schedules mentioned therein or the contraindications stated by the manufacturers differ from the statements made in the present book. Such examination is particularly important with drugs that are either rarely used or have been newly released on the market. Every dosage schedule or every form of application used is entirely at the user's own risk and responsibility. The authors and publishers request every user to report to the publishers any discrepancies or inaccuracies noticed. If errors in this work are found after publication, errata will be posted at [www.thieme.com](http://www.thieme.com) on the product description page.

Some of the product names, patents, and registered designs referred to in this book are in fact registered trademarks or proprietary names even though specific reference to this fact is not always made in the text. Therefore, the appearance of a name without designation as proprietary is not to be construed as a representation by the publisher that it is in the public domain.

To my wife Liudmila, for wholeheartedly supporting me in my journey. To my mother Olga and to the memory of my father Georgiy, who taught me by their example the importance of sacrifice, kindness, passion for care, and striving for excellence. I am indebted to my teachers Mark C. Preul, Peter Nakaji, and Vadim A. Byvaltsev for infusing me with their spirit of curiosity and for being constant sources of wisdom and inspiration.

*Evgenii Belykh, MD*

Dedicated to my family, for their love and endless support.

*Nikolay L. Martirosyan, MD*

To Joseph M. Zabramski, who took a young intern's request seriously and spent endless hours teaching me the basics of bypass surgery. To Robert F. Spetzler, whose dedication to excellence at work and balance in life is an inspiration. To Cameron G. McDougall, who through outstanding surgical acumen and thoughtfulness in case selection taught me much about cerebrovascular disease. Thank you all for all your support and friendship over the years.

*M. Yashar S. Kalani, MD, PhD*

To all who, like me, are constantly learning, and to all who give back by teaching: my colleagues, my residents, my students, and especially my family.

*Peter Nakaji, MD*
