THIRD EDITION

## **Editors**

**Peter Cameron, MBBS MD FACEM**

*Professor of Emergency Medicine, The Alfred Hospital and Monash University,  
Melbourne, Australia*

**Gary Browne, MD MBBS MSpMed FRACP  
FACEM**

*Professor of Emergency Medicine, The Children's Hospital at Westmead  
Chair of Discipline of Emergency Medicine, The University of Sydney  
Head of Academic Emergency Medicine, The Children's Hospital at Westmead,  
Sydney, Australia*

**Biswadev Mitra, MBBS MHSM PhD FACEM**

*Professor of Emergency Medicine, The Alfred Hospital and Monash University,  
Melbourne, Australia*

## Stuart Dalziel, MBChB FRACP PhD

*Director of Emergency Medicine Research, The University of Auckland and Starship Children's Hospital, Auckland, New Zealand*

## Simon Craig, MBBS MHPE MPH FACEM

*Adjunct Clinical Associate Professor, Monash University; Emergency Physician, Monash Medical Centre, Monash Health, Melbourne, Australia*

## **Section 1. Approach to the Paediatric Patient**

---

### 1.1. Approach to the paediatric patient

Introduction

Children with fever

Evolving illness in children

The environment

Triage

Front loading care

The paediatric approach

History

Examination

Gentle, distraction, painful last

When to investigate

The parents

Management of febrile children

The role of the GP in paediatric emergency management

Reflection on the Practice of Paediatric Emergency

## 1.2. Common chronic paediatric conditions

Introduction

Cerebral palsy

Cystic fibrosis

The ex-premature infant

Autism spectrum disorder

## Section 2. Resuscitation

---

### 2.1. Paediatric cardiopulmonary arrest

Epidemiology

Aetiology

Preventing cardiac arrest

Outcome

Differences compared to adults

Development of resuscitation guidelines

Ethics of paediatric resuscitation

## 2.2. Paediatric basic life support

Introduction

Paediatric versus adult basic life support

Basic life support techniques and age

Preparation and equipment

Basic life support sequence

Precautions and complications

Relief of foreign body airway obstruction

## 2.3. Paediatric advanced life support

Introduction

Diagnosing cardiac arrest

Epidemiology

Oxygen, ventilation and advanced airway support

Ventilation

Advanced airway support

Laryngeal mask airway

Management of the difficult airway

Monitoring

Vascular access

Fluid therapy

Management of pulseless arrhythmias

Management of pulsatile dysrhythmias

Post-resuscitation management

Cessation of cardiopulmonary resuscitation

## 2.4. Paediatric resuscitation in specific circumstances

Avoiding cardiac arrest during critical care management

Anaphylaxis

Asthma

Drowning

Traumatic cardiac arrest

Toxicological emergencies

Envenomation

Marine envenomation

## 2.5. Shock

Introduction

Diagnosis and assessment

Initial management

Further management

## 2.6. Sepsis recognition and initial management

Introduction

Background

Definition

Aetiology

Pathophysiology

Diagnosis

Initial emergency management

Disposition

## Section 3. Neonatal Emergencies

---

### 3.1. The normal neonate

Definition and introduction

Common reasons for healthy neonates to present to the emergency department

Summary

### 3.2. The crying infant

Introduction

Recurrent crying

Acute crying

Disposition

### 3.3. Neonatal Dermatology

Skin in the Neonatal Period

Neonatal erythroderma

Red scaly rashes

Vesicles and blisters

Pustular lesions

Birthmarks

Blue/purple lesions

Vascular lesions in the neonatal period

### 3.4. Acute neonatal emergencies

The Neonatal Period

Neonatal resuscitation

Assessment of the neonate

The neonate with vomiting  
The neonate with seizures  
The neonate with breathing difficulty  
The neonate with prolonged jaundice

### 3.5. Neonatal resuscitation

Introduction  
Aetiology and pathophysiology  
Preparation  
Assessment at birth  
Ventilation  
Heart rate  
Colour  
Muscle tone and reflex irritability  
Medications  
Specific resuscitation situations  
Post-resuscitation stabilisation  
Prognosis

## **Section 4. Trauma in Children**

---

### 4.1. Introduction to paediatric trauma

Prevalence  
Prevention  
Succinct treatment (salvage)  
Primary survey  
Paediatric differences

Other issues during initial stabilisation

Secondary survey

Orthopaedic trauma

Rehabilitation

## 4.2. Paediatric neurotrauma

Introduction

Epidemiology

Pathophysiology

Classification

Assessment

## 4.3. Spinal injury

Introduction

Developmental anatomy and physiology

Initial assessment

Spinal immobilisation

Cervical spine injuries

Thoracic and lumbar spine injuries

Spinal cord injury

Spinal cord injury without radiographic abnormality

## 4.4. Thoracic injuries in childhood

Introduction

Initial approach in the emergency department

Chest wall injury

Pulmonary injury

Tracheobronchial injuries

Mediastinal injury

Cardiac injuries

Diaphragmatic injury

Emergency department thoracotomy

## 4.5. Abdominal and pelvic trauma

Introduction

History

Examination

Investigations

General management

Surgical issues

Hollow viscus injuries

Pancreatic and renal injuries

Penetrating trauma

Pelvic fractures

Disposition

## 4.6. Burns

Introduction

Pathophysiology

Classification

History

Examination

Investigations

Management

Management of burns

Electrical burns

Chemical burns

#### 4.7. Children in a disaster response

Introduction

Phases of disaster response

#### 4.8. Wound management

Introduction

Classification of wounds

Evaluation of the patient with a laceration

Treatment of wounds

Wound closure

Post-wound-closure care

Treatment of selected injuries

## **Section 5. Cardiovascular**

---

### 5.1. Cardiovascular assessment and murmurs

Introduction

History

Physical examination

Chest X-ray

The child with an asymptomatic murmur

Pathological murmurs

Disposition

## 5.2. Chest pain

Introduction

Immediate approach

General approach

Summary

## 5.3. Syncope

Introduction

Aetiology

Typical presentations

Clinical

Investigations within the emergency department

Further investigations of syncope

Management of syncope within the emergency department

Summary

## 5.4. Cyanotic heart disease and tetralogy of Fallot spells

Introduction

Cyanotic congenital heart disease

Clinical features

Investigations

Management

Disposition

Tetralogy Spells

Investigations

Treatment

Disposition

## 5.5. Heart failure

Definition

Causes of congestive heart failure

Clinical manifestations and investigations

Management

## 5.6. Congenital heart disease

Introduction

Undiagnosed congenital heart disease

Complications/residua of congenital heart disease and its treatment

Congenital heart disease and intercurrent illness

## 5.7. Acute rheumatic fever

Introduction

Investigations

Treatment

Prevention and prophylaxis

## 5.8. Infective endocarditis

Introduction

Epidemiology

Pathophysiology

Microbiology

History

Examination

Modified Duke criteria

Investigations

Differential diagnosis

Treatment

Prognosis

Prevention

## 5.9. Kawasaki disease

Introduction

Pathophysiology

Clinical features

Incomplete Kawasaki disease

Differential diagnosis

Complications

Investigations

Treatment

Refractory Kawasaki disease

Prognosis

## 5.10. Cardiac arrhythmias

Introduction

Normal conduction system

The cardiac action potential

Pathogenesis of arrhythmias

General principles for arrhythmia management

Role of 'molecular autopsy' in sudden unexplained cardiac death in the young

## **Section 6. Respiratory**

---

## 6.1. Stridor and noisy breathing

Introduction

Initial assessment

History

Examination

Common causes of acute stridor in children

Common causes of chronic stridor in children

## 6.2. Upper respiratory tract infections

Introduction

Nasopharyngitis

Stomatitis

Pharyngitis/tonsillitis

## 6.3. Inhaled foreign body

Introduction

Upper airway foreign bodies

Treatment

Lower airway foreign body

Prevention

## 6.4. Croup

Introduction

Presentation

Investigations

Differential diagnosis

Treatment and disposition

Prognosis

Prevention

## 6.5. Acute asthma

Introduction

Diagnosis of asthma

Risk factors for mortality

Clinical assessment

Differential diagnosis

Treatment

Discharge from hospital

Prognosis

Prevention

Future directions/research

## 6.6. Pertussis

Introduction

Pathophysiology

Epidemiology

History

Examination

Investigations

Differential diagnosis

Complications

Treatment

Prognosis

## 6.7. Community-acquired pneumonia

Introduction

Definition

Aetiology

Clinical findings

Investigations

Management

Complications

Prevention

Conclusion

## 6.8. Bronchiolitis

Introduction

Clinical assessment

Treatment

Prognosis

Prevention

# Section 7. Gastroenterology and Hepatology

---

## 7.1. Abdominal pain

Introduction

Pathophysiology

Aetiology

Assessment

History

Examination

Investigations

Management

Disposition

Acute Appendicitis

Clinical features

Differential diagnoses

Investigations

Management

Meckel's Diverticulum

Clinical features

Differential diagnoses

Investigations

Management

Chronic Abdominal Pain

Assessment

Diagnosis

Management

## 7.2. Vomiting

Non-Surgical Vomiting

Definitions

Clinical evaluation

Examination

Differential diagnoses

Investigations

Management

Conclusions

Surgical (Bilious) Vomiting

Causes

Complications

Investigations

Treatment

### 7.3. Gastrointestinal bleeding

Introduction

Aetiology

History

Examination

Investigations

Initial medical therapy

Surgery

Treatment

Disposition

### 7.4. Gastro-oesophageal reflux

Introduction

Pathophysiology

History

Examination

Differential diagnosis

Complications

Investigations

Treatment

Follow-up

## 7.5. Pyloric stenosis

Introduction

Epidemiology

Clinical presentation

Examination findings

Imaging studies

Differential diagnosis

Management

Complications

## 7.6. Ingested foreign bodies

Introduction

History

Examination

Investigations

Treatment

Disposition

Prevention

## 7.7. Acute liver failure

Introduction

Aetiology

Pathophysiology

Presentation

Investigations

Management

Disposition

Prognosis

Prevention

## 7.8. Diarrhoea

Introduction

Definitions

Clinical evaluation

Examination

Differential diagnoses

Investigations

Management

Conclusions

## 7.9. Management of acute hepatitis in children presenting to the emergency department

Introduction

Aetiology

History

Examination

Investigations

Viral hepatitis

Drug- and toxin-induced liver injury

Chronic liver disease presenting as acute hepatitis

Other causes of chronic liver disease presenting in childhood

## 7.10. Intussusception

Introduction

Aetiology

Epidemiology

Clinical

Investigations

Management

Outcome

## 7.11. Herniae

Introduction

Types of herniae

Complications

Treatment

## 7.12. Gastroenteritis

Introduction

Aetiology

History

Examination

Differential diagnosis

Investigations

Treatment

Severely dehydrated

Other treatments

Disposition

Prognosis

## 7.13. Constipation

Introduction

Definitions

Pathophysiology

Management basics

Constipation in babies

Acute constipation

Chronic constipation

Investigations

Management

Medications

## 7.14. Inflammatory bowel disease

Introduction

New diagnoses

Known IBD patients

Common treatments and their complications

## **Section 8. Neurology**

---

### 8.1. Cerebrospinal fluid shunt complications

Introduction

Clinical presentation

Examination

Investigations

### 8.2. Raised intracranial pressure

Introduction

Particular issues in children

Clinical features of raised intracranial pressure

Other examination findings in raised intracranial pressure

Investigations

Some particular causes of raised intracranial pressure

### 8.3. Seizures and non-epileptic events

Introduction

General comments

Classification of seizures

Febrile seizures

Presentation to Emergency Department

Presentation post a possible seizure

Presentation of a seizure

### 8.4. Acute weakness

Introduction

Presentation

Primary survey approach

History

Examination

Investigations

Specific conditions causing acute weakness

### 8.5. Acute ataxia

Introduction

Pathophysiology

Differential diagnosis

Chronic ataxia

Clinical evaluation of the patient

Examination

Investigations

Management

Disposition

## 8.6. Headache

Introduction

Incidence

Pathophysiology

Clinical assessment

Management

Disposition

Migraine

Pathophysiology

Clinical features

Treatment

Disposition

Conclusions

## 8.7. Central nervous system infections: Meningitis and encephalitis

Introduction

Meningitis

Brain abscess

Encephalitis

Conclusion

## **Section 9. Infectious Diseases**

---

### 9.1. Infectious diseases

Fever

Empiric antibiotic therapy

Common infectious exanthems

What specimens, when should they be ordered and what tests?

Infection control in the emergency department

Needlestick injury

Immunisation

## **Section 10. Metabolic Emergencies**

---

### 10.1. Inborn errors of metabolism

Introduction

Physiology and pathogenesis

Clinical features

Investigation

Management

Chronic presentations

Extended newborn screening

Conclusion

### 10.2. Hypoglycaemia in the non-diabetic child

Introduction

The hypoglycaemia screen

Causes of hypoglycaemia

Treatment of hypoglycaemia

### 10.3. Diabetic emergencies in children

Diagnosis

Diabetic ketoacidosis

Hypoglycaemia

The child with an insulin pump

The child with diabetes and intercurrent illness

Diabetic child and surgery

Long-term management

### 10.4. Thyroid emergencies

Thyrotoxicosis

Neonatal thyrotoxicosis

Hypothyroidism

Congenital hypothyroidism

Hashimoto's thyroiditis

### 10.5. Adrenal emergencies

Adrenal Crisis

Clinical presentation

Disposition

Prevention

Cushing's Syndrome

Presenting symptoms

Diagnostic testing

Treatment

## 10.6. Disorders of fluids, electrolytes and acid–base

Introduction

Physiology

Clinical assessment

Investigations

Treatment

Investigation and management of fluids in different conditions

Acid–base disorders

## **Section 11. Haematology and oncology**

---

### 11.1. The use of blood products in children

Introduction

Packed red blood cells

Platelets

Fresh frozen plasma

Cryoprecipitate

Clotting factor concentrates

Albumin

Normal human immunoglobulin

Hyperimmune immunoglobulins

Risks of blood component use

### 11.2. Anaemia

Introduction

Acute management

Neonatal anaemia

Anaemias of childhood

Haemolytic anaemias

### 11.3. Disorders of coagulation

Haemophilia

von Willebrand disease

### 11.4. Platelet disorders

Introduction

Immune thrombocytopenia

Chronic immune thrombocytopenia

### 11.5. Vasculitis

Introduction

Clinical presentation

Classification

Small-Vessel Vasculitis

Anti-cytoplasmic-antibody-associated vasculitis

Medium-Vessel Vasculitis

Polyarthritides nodosa

Large-Vessel Vasculitis

Secondary Vasculitis and Vasculitis Mimics

### 11.6. Acute leukaemia

Introduction

Classification

Clinical presentation

Differential diagnosis

Investigations

Prognosis

Complications

Management

## 11.7. Febrile neutropaenia

Introduction

Presentation

Investigations

Treatment

## 11.8. Emergencies in paediatric oncology

Emergency Complications of Paediatric Malignancy

Fever and infection

Gastrointestinal emergencies

Blood product use in oncology

Cardiothoracic emergencies

Metabolic emergencies

Genitourinary emergencies

Neurological emergencies

Brain and Spinal Cord Tumours in Children

Brain tumours

Spinal cord compression

## **Section 12. Dermatology**

---

## 12.1. Dermatology

Introduction

Erythroderma and skin failure

Vesiculobullous rashes

Pustular rashes

Papular (raised) rashes

Red scaly (papulosquamous) rashes

Eczematous rashes

Red blanching rashes (erythematous)

Purpuric rashes

Vascular tumours – haemangiomas and haemangioma variants

Vascular malformations

Management of vascular malformations

Hyperpigmentation

Hypopigmentation

Skin texture

Mouth disorders

Anogenital rashes

Zinc and other nutritional deficiencies

Anogenital papules and lumps

Immunodeficiency states

Hair problems

Nail problems

Itch without rash

## Section 13. Eyes

---

## 13.1. Ophthalmological emergencies

Introduction

History

Examination

The red eye in paediatrics

## 13.2. Congenital, developmental and neoplastic conditions of the eye

Deficits in visual acuity

Strabismus

Paediatric cataracts

Congenital nasolacrimal duct obstruction

Infantile glaucoma

Ocular tumours

Retinoblastoma

Rhabdomyosarcoma

Neuroblastoma

## 13.3. Ocular trauma

Introduction

Globe trauma

Eyelid trauma

Orbital trauma

# Section 14. Ent and Dental

---

## 14.1. The ear

Otitis externa

Acute otitis media

Discharging otitis media – chronic suppurative otitis media

Otitis media with effusion

Mastoiditis

Trauma

## 14.2. The nose

Rhinitis and sinusitis

Epistaxis

Nasal trauma

## 14.3. The mouth and throat

Stomatitis

Differential diagnosis

Pharyngitis/tonsillitis

Peritonsillar abscess

Post-tonsillectomy haemorrhage

Oral/dental trauma

Oral/dental infection

Other dental issues

## 14.4. Retropharyngeal abscess

Introduction

History

Examination

Investigation

Treatment

## 14.5. Foreign bodies and caustic ingestion

Nasal foreign bodies

Aural foreign bodies

Complications

Caustic ingestion

## Section 15. Obstetrics and Gynaecology

---

### 15.1. Paediatric gynaecology

Infant and prepubescent gynaecology

Adolescent gynaecology

### 15.2. Emergency contraception

Introduction

Clinical assessment

Available medicines

Medicine interactions

Medicine contraindications

Medicine adverse effects

Medicine outcomes

Copper intrauterine devices

## Section 16. Renal

---

### 16.1. Acute kidney injury

Introduction

Pathophysiology

Clinical presentation

Treatment

Acute presentation of chronic renal failure

Acute kidney injury in the renal transplant recipient

## 16.2. Haematuria

Isolated microscopic haematuria

History

Examination

Investigation

Disposition

## 16.3. Hypertension

Introduction

History

Examination

Emergency department management

## 16.4. Urinary tract infection in pre-school children

Introduction

History and examination

Diagnosis

Treatment

Prognosis

Prevention

## 16.5. Haemolytic uraemic syndrome

Introduction

Definition of haemolytic uraemic syndrome

Classification of haemolytic uraemic syndrome

Pathophysiology of haemolytic uraemic syndrome

History

Examination

Investigations

Differential diagnosis

Treatment

Prognosis

Complications

Prevention

## 16.6. Idiopathic nephrotic syndrome

Introduction

Pathophysiology of proteinuria

Mechanisms of proteinuria

Definition of nephrotic syndrome

Classification of paediatric nephrotic syndrome

Idiopathic nephrotic syndrome: epidemiology

Clinical features of idiopathic nephrotic syndrome

Investigations

Differential diagnosis

Complications of idiopathic nephrotic syndrome

Treatment of initial nephrotic phase

Prognosis

## 16.7. Henoch–Schönlein purpura

Introduction

Epidemiology

Pathogenesis

Diagnostic criteria for Henoch–Schönlein purpura

Clinical features

Diagnosis and investigation

Differential diagnosis

Treatment

Long-term prognosis and follow-up

## Section 17. Psychiatric

---

### 17.1. Paediatric psychiatric emergencies

Introduction

General approach

Common Paediatric Psychiatric Presentations

Suicidal patients

Anxiety disorders

Psychosis

Other psychiatric presentations

Acknowledgement

### 17.2. The treatment of the behaviourally disturbed adolescent

Introduction

The principles of psychiatric triage

The ABCC of rapid psychiatric assessment

Managing the ABCC including restraint and acute sedation

Conclusion

### 17.3. Autism and behavioural disturbance in the pre-adolescent child

Introduction

Underlying mechanisms in autistic spectrum of disorders/neurodevelopmental disorders

Approach to assessment

Challenges in emergency department presentations

Approach to management

Management

Ongoing management in the community

Conclusion

## **Section 18. Crisis Intervention**

---

### 18.1. Sexual assault

Introduction

Definitions

Attitudes/myths surrounding child sexual assault

Epidemiology of child sexual assault

Child sexual assault and emergency medicine

Recognition of child sexual assault

Signs and symptoms

Genitoanal anatomy

Sexually transmitted infections

Diagnostic considerations

Role of the emergency physician

## 18.2. Child at risk

Introduction

Definition

The community response to the child at risk

## **Section 19. Administration In EMS**

---

### 19.1. Managing the death of a child in the emergency department: Bereavement issues

Introduction

The resuscitation process

Talking to parents and families

Laying out of the child

Viewing the body – quiet suite

The grief response

Support of the family

Cultural implications

Legal issues

Organ and tissue donation and collection

Debriefing and support for emergency department staff

Collaboration with paediatric palliative care services

The concept of a good death

Conclusion

## **Section 20. Analgesia and Sedation**

---

### 20.1. Analgesia

Introduction

Assessment of pain

Management

Non-pharmacological methods

Pharmacological methods

## 20.2. Paediatric procedural sedation within the emergency department

Introduction

Pre-procedure

Intra-procedure

Post-procedure

Non-pharmacological methods

Pharmacological methods

## **Section 21. Poisoning**

---

### 21.1. General approach to poisoning

Introduction and epidemiology

Diagnosis

Risk assessment

Investigations

Resuscitation

Decontamination

Antidotes

Enhanced elimination

Supportive care

Consultation and disposition

## 21.2. Specific poisons

Common poisons

Rare and dangerous poisons

## Section 22. Environmental

---

### 22.1. Envenomation

Introduction

Snakebite

Scorpion stings

Spiderbite

Tick bite paralysis

Jellyfish stings

Venomous fish stings

Venomous marine molluscs

### 22.2. Drowning

Introduction

Epidemiology

Aetiology

Pathophysiology

History

Examination

Investigations

Differential diagnosis

Treatment

Disposition

Prognosis

Prevention

## 22.3. Heat-induced illness

Introduction

Causes of heat-related illness

Investigations

Management

Prognosis and disposition

## 22.4. Cold injuries

Introduction

Normal physiology: a review

Hypothermia

Localised cold injuries

Frostbite

Hypothermia not due to environmental causes

## 22.5. Anaphylaxis

Introduction

Pathophysiology

Aetiology

Clinical features

Investigations

Treatment

Diagnosis

Prevention

## **Section 23. Ultrasound**

---

### 23.1. Ultrasound

### 23.2. Diagnostic ultrasound in paediatric emergency medicine

### 23.3. Ultrasound guidance for procedures

Ultrasound guidance for procedures

### 23.4. Incorporating ultrasound into paediatric resuscitation

## **Section 24. Common Procedures**

---

### 24.1. Estimating the weight of infants and children

Background

Age-based tools to estimate body weight

Length- and body-habitus-based tools

Tips

### 24.2. Basic airway management techniques

Background

Oropharyngeal and Nasopharyngeal Airways

Contraindications

Equipment

Preparation

Positioning

Procedure

Complications

Tips

Laryngeal Mask Airway

Equipment

Preparation

Positioning

Procedure

Complications

Tips

Bag-Valve-Mask and Flow-Inflating Mask Ventilation

Contraindications

Bag-Valve-Mask Equipment

Preparation

Positioning

Procedure

Complications

Tips

Flow-Inflating Bag

Equipment

Preparation

Procedure

## 24.3. Non-Invasive Ventilation

Non-Invasive Continuous Positive Pressure Ventilation

Contraindications

Humidified High-Flow Nasal Prong Oxygenation

Equipment

Procedure

Complications

Tips

T-Piece Ventilation Device

Equipment

Procedure

Complications

Tips

Continuous Positive Airway Pressure/Biphasic Positive Airway Pressure

Equipment

Contraindications

Relative contraindications

Procedure

Complications

Tips

## 24.4. Endotracheal intubation

Background

Indications

Contraindications

Equipment

Preparation

Positioning

Procedure

Complications

Tips

Confirmation of Intubation

Indications

Contraindications

Equipment

Preparation and positioning

Procedure

Complications

Tips

## 24.5. The surgical airway

Background

Indications

Contraindications

Needle cricothyroidotomy

Surgical cricothyroidotomy

## 24.6. Chest procedures

Introduction

Needle Thoracostomy

Indications

Contraindications

Equipment

Preparation

Procedure

Complications

Tips

Tube Thoracostomy

Indications

Contraindications

Equipment

Preparation

Procedure

Complications

Tips

Three-Sided Dressing

Indications

Contraindications

Equipment

Preparation

Procedure

Pericardiocentesis

Indications

Contraindications

Equipment

Standard preparation

Procedure

Complications

Tips

## 24.7. Removing and replacing a tracheostomy tube

Background

Indications for emergent replacement

Contraindications

Equipment

Preparation

Procedure

Complications

Tips

## 24.8. Central and peripheral intravenous lines

Background

Indications

Contraindications

Peripheral venous catheter placement

Central venous line placement

## 24.9. Intraosseous infusions

Background

Indications

Contraindications

Equipment

Preparation

Procedure

Complications

Tips

## 24.10. Umbilical vessel cannulation

Background

Indications

Contraindications

Equipment

Preparation

Procedure

Complications

Tips

## 24.11. Defibrillation

Background

Indications for defibrillation (asynchronous)

Indications for synchronous cardioversion

Contraindications

Equipment

Standard preparation

Standard procedure

Automated external defibrillators procedure

Complications

Tips

## 24.12. Transurethral catheterisation and suprapubic bladder aspiration

Background

Indications

Contraindications

Transurethral catheterisation

Suprapubic aspiration

## 24.13. Lumbar puncture

Background

Indications

Contraindications

Equipment

Preparation and positioning

Procedure

Complications

Tips

## 24.14. Reduction of paediatric inguinal hernias

Introduction

Preparation

Procedure

Inguinal hernias in girls

Complications

## 24.15. Paraphimosis

Introduction

Indications

Contraindications

Procedures

Complications

Tips

## 24.16. Gastrostomies and other enteral feeding devices – trouble shooting in the emergency department

Background

Anatomy of a percutaneous endoscopic gastrostomy tube

Percutaneous endoscopic gastrostomy insertion method

Complications

Percutaneous endoscopic gastrostomy displacement

Buried bumper  
Gastrocolocutaneous fistula  
Peristomal leak  
Peristomal infection  
Mechanical problems – blockage  
Jejunal feeding devices  
Granulation tissue

## **Section 25. Orthopaedics and Rheumatology**

---

### 25.1. Orthopaedics and rheumatology

Introduction  
The child with acute musculoskeletal pain or dysfunction  
Generalised or multifocal bone/joint pain  
Other important subacute paediatric musculoskeletal presentations  
Conclusion  
Acknowledgement

### 25.2. Child with a limp

Introduction  
History  
Examination  
Investigation  
Clinical decision making in a child with a limp  
Specific conditions

### 25.3. Fractures and dislocations

Fracture patterns in childhood  
Initial assessment and management  
Upper limb and shoulder girdle injuries  
Lower limb and pelvis injuries  
Conclusions

## 25.4. Risk management in acute paediatric orthopaedics

Introduction  
Non-identification or delayed identification of paediatric fractures  
Adverse events in acute paediatric orthopaedics

## **Section 26. Male Genitalia**

---

### 26.1. Male genitalia

The acute scrotum  
Epididymo-orchitis  
Idiopathic scrotal oedema  
Testicular tumours  
Irreducible inguinal hernia  
Rupture of the testis  
Acute hydrocele  
Acute problems of the penis and foreskin  
Introduction  
Phimosis of the foreskin  
Balanitis  
Priapism

## Section 27. Transport and Retrieval

---

### 27.1. Paediatric emergency retrieval

Paediatric retrieval

What's different about children?

Paediatric emergency referrals

Paediatric referral and retrieval – roles and expectations

Paediatric retrieval staff

Paediatric retrieval equipment

Criteria for transport

Degrees of urgency

Transport platforms

While waiting

Stabilisation

Communication and retrieval leadership

Framework for communications during paediatric retrieval

Interface with adult retrieval

Parents

Paediatric retrieval and end-of-life situations

Quality

Summary

### 27.2. Sick child in a rural hospital

Introduction

Challenges in the rural setting

Caring for the critically ill child

What can be done to assist care in remote environments?

Relations between rural and urban hospitals

Acknowledgement

## **Section 28. Teaching Paediatric Emergency Medicine**

---

### 28.1. Availing web-based resources

Accessing web-based resources

Needs of paediatric emergency medicine staff

Educational tools available online

Social media

Pitfalls of online content

### 28.2. Teaching paediatric emergency medicine

Introduction

Desirable attitudes in paediatric emergency medicine

Skill set for paediatric emergency

Putting knowledge into perspective

Helping others acquire knowledge, skills and attitudes: modes of learning

Learning resources

Conclusions

## **Section 29. Paediatric Research in the Emergency Department**

---

### 29.1. Research in children in the emergency department

Introduction

Research science

The ethics of medical research

The practice and governance of research

Implementation research: an emerging research field

Multicentre research

Funding research

## **Section 30. Adolescent Medicine in the Emergency Department**

---

### 30.1. Adolescent medicine in the emergency department

Introduction

Adolescent health problems in the emergency department

The approach to the adolescent in the emergency department

Summary

### 30.2. Eating disorders and anorexia

Introduction

History

Examination

Investigations

Complications

Differential diagnosis

Management

Prognosis

Index
